

Supporting People Through Change

Supporting People Through Change

Supporting People Through Change

This practical activity provides you with a structured process using both the ADKAR Model and the Change Equation. You can use this to plan how you can work with those people that are important in bringing the change about. It will help you to identify the main areas to concentrate on to be more effective in managing the change more smoothly.

The activity will help you to understand and apply ADKAR and the Change Equation within your change management programmes using a results-oriented approach to:

- manage personal transition
- focus conversations about change
- diagnose gaps
- identify corrective actions

The goal of ADKAR is to give each individual the knowledge and tools to be successful in change.

The best way to understand the usefulness of the ADKAR model is to apply it to a situation you are close to. This will help to separate the key elements or stages of the ADKAR model. It can work with change that you have been trying to make happen that is not working regardless of your continued efforts. Begin by identifying change that you are working with or a change you are having difficulty making in other people (friends, family, work colleagues or your team).

Complete the questions to the best of your ability, rating each element on a scale of 1 (e.g. no awareness) to 5 (e.g. complete awareness).

Supporting People Through Change

Briefly describe a personal change in behaviour that you are trying to facilitate.

The ADKAR model of individual change consists of five components:

- Awareness
- Desire
- Knowledge
- Ability
- Reinforcement

Awareness

List the reasons why you believe this change is necessary.

Review the reasons and the degree to which the people or person you are trying to change are aware of these reasons.

Rank this on a 1 to 5 scale.

Awareness Rank

Supporting People Through Change

Desire

List the factors or consequences (positive and negative) that will create a desire to change.

Consider these motivating factors including the person's or people's conviction with these. Assess their desire to change.

Rank this on a 1 to 5 scale.

Desire Rank

Knowledge

List the knowledge and skills needed for the change, both during and after the transition.

Supporting People Through Change

Rate the person's or people's training or knowledge in these areas.

Rank this on a 1 to 5 scale.

Knowledge Rank

Ability

Considering the knowledge and skills from above and evaluate the person's ability to perform or act in the new way. What barriers may inhibit people's ability?

To what extent does the person or people have the ability to implement the new skills, knowledge and behaviours?

Rank this on a 1 to 5 scale.

Ability Rank

Reinforcement

List the reinforcements that will help to retain and reinforce the change.

What incentives are in place to make the change stick?

What incentives do people have not to change?

Supporting People Through Change

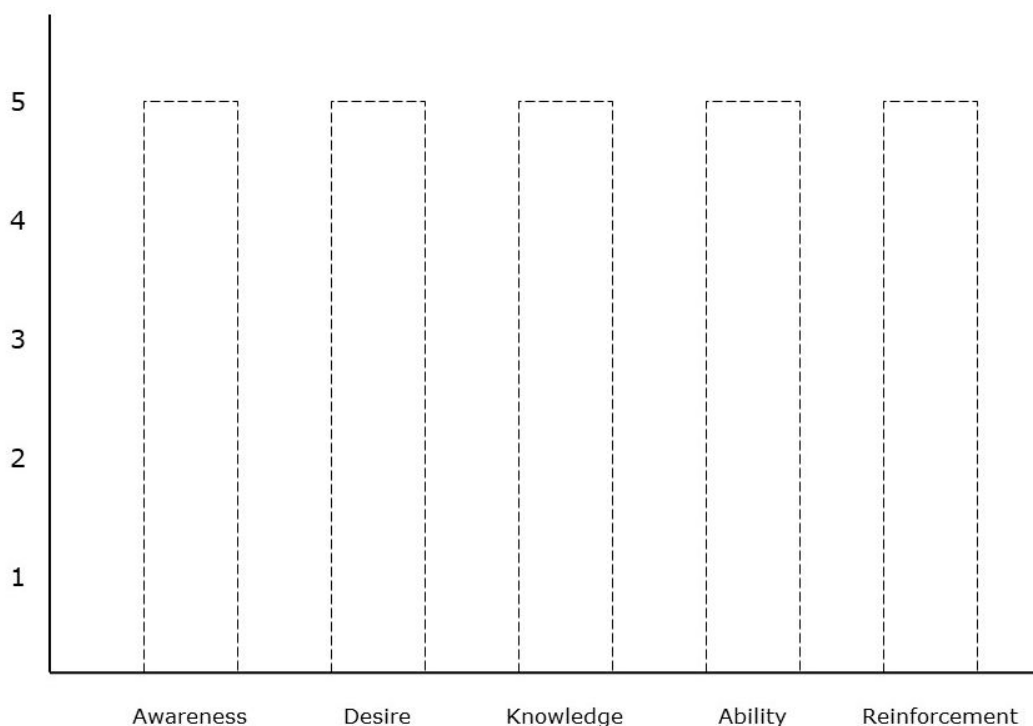

To what degree are reinforcements in place to support and maintain the change.

Rank this on a 1 to 5 scale.

Reinforcement Rank

Using your scores, create a bar graph to show your ADKAR change profile. Mark your score for each element and shade the area below the mark to create each bar of the graph. Look at those areas that scored 3 or less to identify which is the priority that will be your primary focus.

Supporting People Through Change

Now you have assessed the Awareness, Desire, Knowledge, Ability and Reinforcement within your change management programme, let us turn to using the Change Equation.

This will help you to determine what you need to do to overcome the **Resistance to Change (R)**. Any resistance will have psychological and economic costs for the change and these need to be considered.

Change will occur if

$$(D \times V \times F) > R$$

D: Dissatisfaction with the present

V: Shared Vision of the future

F: Knowledge of the First practical steps

You will have gained some idea about the level of Dissatisfaction from the Awareness and Desire assessment that you have carried out. By working with the Change Equation, you can make this much more explicit and determine the practical steps that you need to take to make the change happen and to work.

Supporting People Through Change

D: Dissatisfaction with the present

How much Dissatisfaction is there?

How can you raise the awareness of the limitations of the present?

A large, empty rounded rectangle with a dark blue border, intended for a response.

Supporting People Through Change

*V: Shared **V**ision of the future*

How can you establish or reinforce a shared positive vision?

What are the best ways to communicate this?

Supporting People Through Change

F: *Knowledge of the **First** practical steps*

What are the first practical steps that you can take?

What are the first practical steps that others can take?
